

Applicability

1 Section 203.4 applies to:

(a) a **pool participant** with a generating **source asset** that has an associated current **offer**<u>when</u> <u>participating in the energy market</u>; and

(b) the ISO,

when participating in the energy market.

Requirements

Compliance Responsibilities

2(1) A **pool participant** may only deliver energy to the **interconnected electric system** pursuant to a **dispatch** or a **directive** the **ISO** issues.

- (2) A pool participant must:
 - (a) operate its generating **source assets** or cause them to be operated; and
 - (b) respond to **dispatches** from the ISO,

using **good electric industry practice**, including the design, implementation and use of reasonable **dispatch** protocols, together with personnel and software systems designed to detect and address errors or omissions in a timely fashion.

Generating Asset Steady State Compliance

3(1) A **pool participant** must not, during **generating asset steady state**, vary the average MW it delivers from a generating **source asset** in any **10 minute clock period** from the **dispatch** MW by more thanoutside the allowable dispatch variance.

(2) A pool participant that is supplying regulating reserve from a generating source asset must. notwithstanding subsection 3(1), ensure that the average MW delivered in any 10 minute clock period is: not outside the allowable dispatch variance plus the regulating reserve.

- (a) not less than the dispatch MW minus the allowable dispatch variance; and
- (b) not greater than the **dispatch** MW plus the **regulating reserve** plus the **allowable dispatch variance**.

Ramping Compliance

- 4(1) A pool participant must move the output of a generating source asset which is:
 - (a) the subject of a **dispatch**; and
 - (b) ramping

towards the MW level indicated in that **dispatch** within ten (10) minutes of the time specified in the **dispatch** but not prior to the time specified in the **dispatch**.

(2) A pool participant must ensure that each generating source asset reaches generating asset steady state in:

- (a) no longer than the period of time calculated as follows:
 - (i) divide the change in **dispatch** MW by the **ramp rate** the **pool participant** submits;
 - (ii) add forty percent (40%) of the time calculated in subsection 4(2)(a)(i) or five (5) minutes, whichever is greater; and

ISO Rules Part 200 Markets Division 203 Energy Market Section 203.4 Delivery Requirements for Energy

(iii) add the ten (10) minutes referred to in subsection 4(1); and

and

- (b) no sooner than the period of time calculated as follows:
 - (i) divide the change in **dispatch** MW by the **ramp rate** the **pool participant** submits; and
 - subtract forty percent (40%) of the time calculated in subsection 4(2)(b)(i) or five (5) minutes, whichever is greater.

Operational Deviation

5(1) A **pool participant** must, if a generating **source asset** experiences an **operational deviation**, verbally inform the **ISO** as soon as practical of the occurrence of the **operational deviation** and provide a description of the cause if known.

(2) A **pool participant** must inform the **ISO** of the information required under subsection 5(1) on a telephone line the **ISO** designates, which must contain a voice recording system.

(3) A pool participant must, if an operational deviation extends for twenty (20) minutes or longer, submit an available capability restatement or MW restatement for the generating source asset that represents the operational capability of the generating source asset and must do so no later than twenty (20) minutes after the commencement of the operational deviation.

Exceptions to Non-Compliance

6(1) Notwithstanding the provisions set out in subsections 3, 4 and 5, the **ISO** must not determine that a **pool participant** is non-compliant with a **dispatch** for a generating **source asset** if the **pool participant** has met its responsibilities as set out subsection 2 and one (1) or more of the following circumstances occur:

- (a) the generating **source asset** is **ramping** into position to provide **operating reserve** in response to a **dispatch** in the **fifteen** (15) minutes before the time indicated in that **dispatch**;
- (b) the generating **source asset** is operating below the **minimum stable generation** level indicated in the Energy Trading System, but only if that generating **source asset** is:
 - (i) synchronizing and its **available capability** the **pool participant** submitted is equal to its **minimum stable generation** and it has received a **dispatch** for that quantity, in MW;
 - (ii) going off line and its available capability the pool participant submitted is equal to zero (0) <u>MW</u> and it has received a dispatch for that quantity, in MW;
 - (iii) unable to follow the ramp rate the pool participant submitted when its output is being increased to its minimum stable generation and the pool participant has submitted a verbal plan to the ISO indicating a proposal for ramping to minimum stable generation, which verbal plan must be provide an estimate of the time required to achieve the ramp rate and be updated for deviations of greater than thirty (30) minutes or fifty (50) MW; or
 - (iv) stopped at an output level not identified in the verbal plan referenced in subsection 6(1)(b)(iii) above, but which is below minimum stable generation for more than thirty (30) minutes for an operational reason and the pool participant has submitted a restatement of the available capability accordingly;
- (c) the generating **source asset** is responding to abnormal frequency through automatic **governor** or **governor system** action;
- (d) an **operational deviation** has occurred and the **pool participant** has complied with subsection 5; and

ISO Rules Part 200 Markets Division 203 Energy Market Section 203.4 Delivery Requirements for Energy

(e) energy is being delivered to the **interconnected electric system** from a generating **source asset** while it is being tested or commissioned or both, in accordance with applicable provisions of the **ISO rules**.

Concurrent Energy and Operating Reserve Requirements

7(1) The **ISO** must, when assessing a **pool participant**'s compliance with subsections 4(3) through 4(6) of <u>sectionSection</u> 205.2 of the **ISO rules**, *Issuing Dispatches and Directives for Operating Reserve* in a situation where there are concurrent energy and **spinning reserve** requirements or energy and **supplemental reserve** requirements, consider the time of the energy **dispatch** to be:

- (a) fifteen (15) minutes after the directive for spinning reserve or supplemental reserve in the case of subsection 4(3); and
- (b) the time the **pool asset** is providing the amount of **real power** described in subsection <u>710(1)</u> of <u>sectionSection</u> 205.5 of the **ISO rules**, *Spinning Reserve Technical Requirements and Performance Standards*, or subsection <u>76(1)</u> of <u>sectionSection</u> 205.6 of the **ISO rules**, *Supplemental Reserve Technical Requirements and Performance Standards*, in the case of subsection 4(4);
- (c) the later of fifteen (15) minutes after the **directive** for **spinning reserve** or **supplemental reserve** or the time of the **dispatch** in the case of subsection 4(5); and
- (d) the time the **pool asset** is providing the amount of **real power** described in subsection <u>710</u>(1) of <u>sectionSection</u> 205.5 of the **ISO rules**, *Spinning Reserve Technical Requirements and Performance Standards*, or subsection <u>76</u>(1) of <u>sectionSection</u> 205.6 of the **ISO rules**, *Supplemental Reserve Technical Requirements and Performance Standards*, in the case of subsection <u>4(6)</u>.

(2) The ISO must, when assessing a **pool participant**'s compliance with subsections 4(3) through 4(6) of <u>sectionSection</u> 205.2 of the **ISO rules**, *Issuing Dispatches and Directives for Operating Reserve* in a situation where there are concurrent energy and **spinning reserve** requirements or energy and **supplemental reserve** requirements, consider the MW quantity to be the energy **dispatch** quantity plus the **spinning reserve** or **supplemental reserve** quantity while the **directive** remains in effect.

Revision history	
Effective	Description
<u>xxxx-xx-xx</u>	Amended Section 3(1) and 3(2) to clarify generating asset steady state compliance. Administrative amendments.
2014-12-23	Added subsection 7 to address requirements in section 205.2 of the ISO rules related to concurrent energy and operating reserve.
2013-01-08	Initial release
