### The AESO invites you to an Open House to discuss the need for transmission development in Southern Alberta

The Alberta Electric System Operator (AESO) has identified the potential for a significant increase in power generation projects throughout southern Alberta, including substantial wind power development.

In its role of planning the transmission system for all Albertans, the AESO is currently investigating the need to reinforce the transmission system so these generation projects can be connected reliably to the provincial grid. Connecting these projects helps meet demand for electricity in other areas of the province. Work is underway to determine how much additional transmission development will be required.

The map above illustrates, in general, potential areas that may require additional transmission capacity in order to carry more electricity.

**Please note: The map does not identify potential line routes. Line routes are developed with public consultation later in**

**the regulatory process governing transmission development in Alberta.**

**Line routes are developed after the need for transmission development has been determined.**

The AESO is holding its first series of Open Houses in southern Alberta to provide opportunities at this early stage in the planning process to discuss the issues facing the transmission system and to review the process for reinforcing the transmission system. Detailed alternatives will only be developed and presented for further discussion once the input from these Open Houses has been incorporated into the planning process.

Please join us to learn more and provide your feedback at our Open Houses on the need for transmission development in Southern Alberta. AESO staff will be on hand discuss this need, answer your questions and record your comments.

Please visit our web site, [www.aeso.ca](http://www.aeso.ca) for more information or call the AESO at 1.888.866.2959.
